TRAP SELECTION

For the vast majority of lepidopteran pests of field crops, the most effective and the most appropriate trapping device is the **AgriSense Funnel Trap**.

Certain smaller moths, primarily forestal tortrix moths and leaf rollers, Coleoptera like pink weevils and grasshoppers, Lepidoptera like plagues, such as the diamond-back moth, are usually caught using the most sensitive **Funnel Delta Trap**.

However, it is only when food is a problem. Funnel traps may be preferable for these smaller species even though they may be considered less effective.

Funnel Delta Traps are effective for many flycatchers, although due to the soft of their mouth. Funnel traps are more appropriate particularly when larger predators are present and the sticky boards of Delta Traps become rapidly clogged. Delta Traps are also appropriate for monitoring the effectiveness of mating disruption treatments against moth pests. Insects are only caught when the treatment does affect, while the treatment is working no moths are caught.

LURE DESIGN & QUALITY

Pheromone lures are carefully chosen devices designed to release pheromones at a constant rate over a lengthy period. Consistent

performance is essential if reliable conclusions on fluctuations of insect populations are to be drawn. Different materials need to be carefully selected depending on the chemical and physical properties of the pheromone pheromone, the desired loading and the release period required.

Standard lures include silicon wires and polyethylene rods which are impregnated with the appropriate pheromone or parapheromone. The polymer may be transformed into a long-life lure by the addition of an additive which increases the period of release from 6 weeks to 6 months.

Waggon's polymer chips for fruit flies contain an even greater quantity of pheromone and offer a superior controlled release profile over a two to six month period.

AgriSense BCS Ltd operates a registered quality management system. Certain lures marked with an asterisk are obtained from established third parties, but are not the responsibility of the products they marked. They fall outside the official scope of our British Standards Institute quality management system. This also applies to experimental products marked @.

PRODUCTS AND PACKING

FUNNEL DELTA TRAP KITS

The AgriSense Funnel Delta Trap consists of a newly designed fully sealed plastic trap which is no longer a need for a sticky bait. The new design ensures a more rapid and stable trap. The variations are listed below:

Description	Product Code
Single Trap Kit 1 white Funnel Delta Trap, 1 pheromone lure, 4 sticky boards, sticks wrapped with lures & instructions 30 kits per box L20 traps	BC22501
5 Trap Kits 5 white Funnel Delta Traps, 5 pheromone lures, 20 sticky boards wrapped with lures & instructions 30 kits per box 100 traps	BC22502

Funnel Delta traps in Bulk

Bulk packed 100 traps with sticky inserts 100 white Funnel Delta Traps packed with 100 lures & 200 sticky inserts	BC251P1
Bulk packed 200 traps without sticky inserts 200 white Funnel Delta Traps packed with 200 lures No sticky inserts	BC251S1

Sticky Inserts for Funnel Delta Traps

Sticky inserts, sticks wrapped in 10x 10 pieces of 1.5mm film	BC2520A
